

TITLE

PRIVACY SCREEN FOR A DISPLAY

ABSTRACT OF THE INVENTION

5 A privacy screen for a display (e.g., a LCD) that comprises a  
polarizing film and a birefringent film is described. The privacy screen  
transmits substantial amounts of light emanating from the display in an  
orthogonal (or near-orthogonal) direction while not transmitting substantial  
amounts of horizontal, non-orthogonal light emanating from the display. In  
this manner, a privacy effect results in that the display is viewable by  
10 someone only when that someone is essentially directly in front of the  
display.
